TU Dresden

Frans Sunito
Jaya Toll Road, Indonesia

Rapid urbanization drives the speed at which cities are growing. Huge strains on the growing cities will take place as there are increased demands on infrastructure and services due to migrating people toward the urban centers, often beyond the expansion or development capacity of the municipal government. The increased needs for infrastructure to cater for urban expansion has spawned the emergence of private communities/cities provided by private parties/developers. These new types of communities/cities offer comfort and convenience for their inhabitants; however they pose serious challenges on a bigger scale where isolated pockets of underdeveloped by-products appear in-between. The summer school aims to bring experts to guide participants in solving the problems arising in the interface of the highly sophisticated private communities/cities and under-developed isolated regions from the city/regional planning and transportation perspectives.

Audience: Young Researchers under 45 and within 5 years of Ph.D. completion

REGISTRATION (LIMITED TO 25 PARTICIPANTS)

DEADLINE JULY 1, 2019
