7. COLLABORATION BETWEEN ACADEMIA AND INDUSTRY ......................................................................... 6

8. MOBILITY AND INTERNATIONAL ATTRACTIVENESS ................................................................................. 7
   Measures aimed at attracting and retaining ‘leading’ national, EU and third country researchers .......... 7
   Inward mobility (funding) ............................................................................................................................... 7
   Outbound mobility ....................................................................................................................................... 7
1. Key data

Key indicators measuring the country’s research performance

The figure below presents key indicators measuring Serbia’s performance on aspects of an open labour market for researchers against a reference group and the EU-27 average.¹

**Figure 1: Key indicators – Serbia**

<table>
<thead>
<tr>
<th>Measure</th>
<th>Serbia</th>
<th>Reference Group Moderate Innovators</th>
<th>EU27</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of researchers (Full Time Equivalent) per thousand labour force (2010)</td>
<td>N/A</td>
<td>5.3</td>
<td>6.6</td>
</tr>
<tr>
<td>Percentage of women as grade A academic staff (2010)</td>
<td>N/A</td>
<td>18.6</td>
<td>19.8</td>
</tr>
<tr>
<td>Number of researchers posts advertised through EURAXESS jobs portal per thousand researchers in the public sector (2012)</td>
<td>N/A</td>
<td>22.2</td>
<td>40.8</td>
</tr>
<tr>
<td>Number of new doctoral graduates (ISCED 6) per thousand population aged 25-34 (2010)</td>
<td>N/A</td>
<td>1.6</td>
<td>1.6</td>
</tr>
<tr>
<td>International scientific co-publications per million population (2011)</td>
<td>133.7</td>
<td>300.3</td>
<td>467.7</td>
</tr>
<tr>
<td>Scientific publications amounting to the top ten percent most-cited publications worldwide as percentage of total scientific publications (2008)</td>
<td>3.1</td>
<td>7.4</td>
<td>10.9</td>
</tr>
<tr>
<td>Percentage of researchers employed on fixed-term contracts (2012)</td>
<td>N/A</td>
<td>31.7</td>
<td>34.3</td>
</tr>
<tr>
<td>Percentage of doctoral candidates (ISCED 6) with a citizenship of another EU 27 Member State (2010)</td>
<td>N/A</td>
<td>4.9</td>
<td>7.8</td>
</tr>
<tr>
<td>Percentage of post-PhD researchers who have been internationally mobile for 3 months or more in the last ten years (2012)</td>
<td>N/A</td>
<td>26.6</td>
<td>31.0</td>
</tr>
<tr>
<td>Non-EU doctoral candidates as percentage of all doctoral candidates (2010)</td>
<td>N/A</td>
<td>5.4</td>
<td>20.0</td>
</tr>
</tbody>
</table>

Data: Based on the average innovation performance, Serbia belongs to the group of Moderate Innovators with a performance below that of the EU-27.²

2. National strategies

The Republic of Serbia is an associate country of the European Union and by signing the Memorandum of Understanding in 2007, Serbian candidates acquired access to European funding, for instance under the 7th Framework Programme.

The Serbian research system is centralised and governed by the Ministry of Education, Science and Technological Development. The Ministry was established in March 2011 and is the legal successor of the previous Ministry of Science and Technological Development. The table below presents key programmes and initiatives intended to implement the strategic objectives of training enough researchers to reach Serbia’s R&D targets, promoting attractive working conditions, and addressing gender and dual career issues.

**Table 1: National strategies**

<table>
<thead>
<tr>
<th>Measure</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Strategy on Development of Vocational Education in the Republic of Serbia (2005)</td>
<td>The strategy provides a complete picture of the further development of vocational education and training in Serbia. It contains a number of recommendations to be implemented by the Government and the Ministry of Education, Science and Technological Development in legislative activity, institutional development, human resources, gathering information from the labour market, the modernisation of the educational curriculum, the organisation of educational processes and modernisation of schools management.</td>
</tr>
<tr>
<td>Strategy on Science and Technological Development of the Republic of Serbia for</td>
<td>The overall objective of the Strategy is to develop a national innovation system where scientists reach European standards and to promote technological development of the economy. The strategy defines seven national priorities in the area of science and</td>
</tr>
</tbody>
</table>
The investment priorities of this Ministry programme for the period 2010-2015 are:

- A human resources programme which will engage individuals in the Serbian scientific diaspora in joint projects and other initiatives;
- The Petnica research centre which welcomes young trainees, many of whom become leaders of science research in Serbia;
- The Mathematics high school campus in Belgrade, which enrols the most talented young mathematicians and others interested in natural sciences from across Serbia;
- The new science and innovation centre in Belgrade for popularisation of science in the general public, including young people.

The total budget of the programme is approximately EUR 33 million.

### National reports and legislation, including provisions regarding the profession of researcher

Source: Deloitte

### 3. Women in the research profession

#### Measures to support women researchers in top-level positions

Serbia does not have concrete measures to support women in top-level positions in research, technology and innovation.

**Maternity leave**

In Serbia, women researchers with open-ended employment contracts are paid from social security funds, during their maternity leave. Researchers with fixed-term contracts are also paid during their maternity leave; however, they lose those benefits after expiry of the contract.

Researchers on stipends may interrupt their stipends for up to one year (and continue their stipend after that period). The duration of maternity leave is up to 365 days for both permanent employment contracts and stipends.

### 4. Open, transparent and merit-based recruitment

#### Open recruitment in institutions

Table 2: Open recruitment in higher education and public research institutions

<table>
<thead>
<tr>

**EURAXESS Services Network**

Approximately 25 research institutions have joined the Serbian Mobility Network by signing the Declaration of Commitment. The portal is fully operational\(^4\).

**5. Education and training**

**Measures to attract and train people to become researchers**

In Serbia, there are many activities aimed at popularising science among young people. For example, the Ministry of Education, Science and Technological Development has a programme offering young researchers the possibility of participating in knowledge Olympiads and other forms of competition.

**Funding of doctoral candidates**

The estimated proportion of the total population of doctoral candidates receiving funding in 2012 is 70%. In 2012, a total of 556 doctoral candidates received stipends.

**Measures to increase the quality of doctoral training**

In the Republic of Serbia, some EUR 60 million was allocated (in 2006 under the umbrella of FP6) to establish Centres of Excellence in priority research fields, such as:

- Energy and environment (national energy institute and national laboratories for water, soil and air quality);
- Materials science (National Physics, Materials Science and Nanotechnology Laboratory – using the current Institute of Physics infrastructure);
- Agriculture and food (Centre of excellence in Novi Sad using the capacities of the Institute for food technologies)\(^5\).

**6. Working conditions**

**Measures to improve researchers’ funding opportunities**

The Ministry of Education, Science and Technological Development is implementing the following programmes to boost research careers and support researchers financially:

- Programme supporting basic research for the research cycle 2011-14 (BR programme);
- Programme supporting research in the field of technological development for the research cycle 2011-14 (TD programme);
- Programme of co-funding for integrated and interdisciplinary research for the research cycle 2011-14 (IIR programme) to support the integration of basic, applied and development research as well as to utilise R&D resources fully, emphasising commercialisation of R&D activities and results;
- Programme of providing and maintaining scientific research equipment and scientific research facilities for the research cycle 2011-14 (SREF programme)\(^6\).

---

\(^4\) Overall progress in EPR implementation, 2009, Annex II

Deloitte.
Remuneration
For information, see the new country profile on remuneration of researchers from the MORE2 study (forthcoming, on the EURAXESS website).

Researchers’ Statute
In Serbia, researchers have the same rights as other employees, except for those with a temporary contract for 3 or 5 years, the extension of which depends on the scientific results produced in the previous period.

‘European Charter for Researchers’ & ‘Code of Conduct for the Recruitment of Researchers’
The Ministry of Education, Science and Technological Development, together with the Bridgehead Organisation, organise ‘info days’ to promote the ‘Charter & Code’.

Autonomy of institutions
There are seven public universities with 89 faculties, and 10 private universities with 60 private faculties. R&D activities in the higher education sector are mostly financed from the government budget.

The autonomy of the higher education system is guaranteed by the Law on Higher Education (2005), which fully implements the Bologna Declaration:

- Academic autonomy – right of teachers to decide on what to teach, how to enroll students, organise the programme of study and organise the Higher Education Institution internally;
- Political autonomy – the right to create statutes and other legal documents, the power to appoint the heads of different units (rector, dean, head of department, etc.) and to deal with internal policy conflicts;
- Financial and managerial autonomy – freedom to decide on salaries, tuition fees, allocation of governmental funds, look for additional funds, as well as recruit teaching staff, researchers and other staff7.

Career development
Serbia offers clear career prospects to researchers. The advancement of researchers in their career is defined by the “Rules of procedure and method of evaluation and quantitative expression of scientific results of researchers” issued by the Ministry for Education, Science and Technological Development. There are five stages:

1. Apprentice (novice) researcher;
2. Associate researcher;
3. Research associate;
4. Senior research associate;
5. Principal research fellow.

All researchers have fixed-term contracts. These last three years for young researchers and five for scientists. Only scientific advisors have permanent contracts. Once the contract expires, a public competition has to be published for researchers in the same or higher rank.

Social security benefits (sickness, unemployment, old-age)
All researchers, regardless of the type of contract or age, are entitled to sickness benefits. However, researchers receiving stipends do not enjoy health cover.

Only researchers with permanent contracts have access to unemployment benefits.

7. Collaboration between academia and industry
The Mini Grants programme, funded by the Innovation Fund, aims to stimulate the creation of innovative enterprises and expand employment opportunities for young graduates. The scheme provides support of up to EUR 100 000 per grant for developments in life sciences, new materials and nanotechnologies, environmental

and climate protection, energy and energy efficiency, food and agriculture, and information and communication technologies (ICT)\textsuperscript{8}.

\textbf{8. Mobility and international attractiveness}

In 2010, the percentage of non-EU doctoral candidates as a percentage of all doctoral candidates was 7.0\% in Serbia compared with 5.3\% among the Innovation Union reference group and an EU average of 20.0\%\textsuperscript{9}.

The Republic of Serbia runs bilateral cooperation programmes with a number of countries (Belarus, China, Croatia, France, Germany, Hungary, Slovakia, Slovenia and Switzerland). This has resulted in the co-financing of R\&D projects carried out by teams consisting of researchers from both countries. Cooperation agreements are ongoing with Austria, Czech Republic, Greece, India, Portugal, Russia, Spain and US\textsuperscript{10}.

\textbf{Measures aimed at attracting and retaining ‘leading’ national, EU and third country researchers}

The Ministry of education, science and technological development has programmes for co-financing researchers from abroad to come and work in Serbia.

There are also many bilateral programmes, mainly with European countries, to finance short-term stays of researchers in Serbia.

\textbf{Inward mobility (funding)}

Serbia does not provide funding for inward mobility including the return of its own researchers from abroad.

\textbf{Outbound mobility}

The Ministry of Education, Science and Technological Development has programmes for co-financing study visits of graduate students and scholars abroad.
